SKILLS

PROJECTS

DataOS - Product

- DataOS® is an empathy-driven, modular architecture data management platform that replaces the multiple point solutions commonly used to manage data. DataOS is a true purpose-built data fabric that turns data into information and information into insight.

Configurator - Product

- Configurator is a manufacturing application that is used to create a configurable good/product up to n-number of features and models. It can create a complex feature and model BOM.

Inventory Tracking Application

- This application is used to maintain inventory and transactions of pharmaceutical clients. They can keep track of their medicines. Based on user group and role, application access will be varied.

Hotwax Commerce - Product

- The HotWax OmniChannel Commerce Suite is a complete retail ecosystem with the strength and flexibility to advance every angle of commerce operations. It is an ERP system that provides warehouse management, order management, CRM, CMS, report generation, store pickup order, B2B and B2C.

Baggit

- Baggit is an e-commerce site that has a collection of all types of handbags, ladies bags, wallets, mobile pouches, belts, caps & many more. Contributed in commerce and store-front of the application.

Apache OFBiz E-Commerce Application

- This is the E-Commerce Application of Apache OFBiz Framework. This is the official demo site for the apache ofbiz e-commerce application. We can browse categories and products. We can select a product, add it to the cart and create an order from the site via registered checkout or express checkout.
